Thyme Pink Magic

Thymus serpyllum 'Pink Magic'

Height: Up to 5cm

Spread: up to 60cm

Suitable for: Sunny, well drained soil, gravel and rocky areas. Pots and containers.

Summary: This is a brand new creeping thyme for 2022. We are sure that it will be very popular. This is a vigorous thyme, spreading rapidly for quick ground cover. It has comparatively large leaves compared to other creeping thyme and large pink flowers in early summer.

More information:

We are looking forward to growing and selling this brand new thyme and integrating it with all of our other popular varieties.

Thyme is a native to both Europe and North Africa, and will thrive in our climate providing it has full sun and a well drained soil. Don't be tempted to add loads of fertiliser as, like all the other thymes, it grows best in relatively poor conditions.

This is a true cascading thyme, which would look lovely raised up in a container as well as its more traditional role as ground cover. In early summer the plants are covered in bright pink flowers. For a neat growth habit trim, these after flowering.

As this is a totally new cultivar to us we would welcome customer feedback once your plants are planted and growing on.
